

Phase I: Controlled Data and Leakage Design

1. Controlled threat-log export

Raw records, one policy state

2. Deterministic cohort construction

Alert filtering and action mapping

3. Leakage-graded feature settings

Core, no-descriptor, and with-policy

Phase II: Reconstruction and Stress Audit

6. Sensitivity and transfer stress

Ablation, duplicate, temporal, and context

5. Core reconstruction evidence

Holdout and cross-validation

4. Policy-action regularity audit

Rule-context entropy

7. Selected-model inspection

SHAP and LIME

Phase III: Model Inspection and Interpretation Boundary

8. Interpretation and release boundary

Offline, non-causal, controlled access
